

## MANNOL ATF-WS 8217

A special low-viscosity synthetic transmission fluid (ATF) for automatic gearboxes of TOYOTA/LEXUS vehicles with latest-generation TOYOTA and AISIN AW gearboxes, including sequential. It ensures a flawless operation of an automatic gearbox, guarantees minimal wear of ball bearings, stuffing boxes and gears, a lasting service life of the whole transmission and fuel economy. It was developed on the basis of the requirements set by the company AISIN WARNER.

## Product properties:

- The highest-quality low-viscosity synthetic base with a consistent high viscosity index in a combination with a multifunctional additive package preserves all its properties in a wide range of temperatures: it ensures good lubricating properties at low (-45 °C) temperatures in winter and ensures a stable oil film under extreme loads and high temperatures in summer, ensures necessary antifriction properties even in the event of a discontinuity of the oil film during overloads;

- The high-technology combination of additives ensures good antifriction properties for gear couplings and required friction properties for friction elements thus ensuring a significant fuel economy, an exceptionally smooth transmission shift and a significant increase in the service life of all transmission elements;

It ensures a coordinated and smooth operation of clutches, extends the service life of friction elements, prevents hydraulic converter's contact elements from sliding when changing modes thus significantly reducing their wear;
It has a superior thermal-oxidative and chemical stability and resistance to the high-temperature thermal degradation throughout the entire service life. It allows reducing lacquering, formation of sludge, soot and other carbon deposits to a minimum, significantly increasing the time between oil changes and ensuring the durability of transmission components thus reducing the equipment maintenance costs;

- It protects metal parts from ferrous and non-ferrous alloys from corrosion when both in and not in operation;

- It effectively resists aeration and foam formation;

- It ensures a compatibility with all sealing materials, prevents them from swelling, hardening and shrinking that allows reducing the costs for spare parts and prevents leakages;

- It reduces noise.

It is recommended for last-generation Toyota and Aisin AW automatic gearboxes in which the compliance with the above-mentioned TOYOTA requirements is required, as well as for automatic gearboxes of passenger cars and commercial vehicles produced by European manufacturers. Colour: red.

Comply with the manufacturer's instructions provided in the user's manual!
