

MANNOL DPF Cleaner

9958

Diesel fuel additive for cleaning and regeneration of all types of Diesel Particulate Filters (DPF) without dismantling and disassembling. Suitable for all types of diesel fuel and for all types of diesel engines equipped and not equipped with automatic DPF regeneration systems. Especially recommended for cars operating in the city (in traffic jams) and / or when using low quality fuel.
Regular use helps to restore the DPF to factory settings.

Product properties:
- Reduces the ignition temperature of soot in DPF, thereby accelerating and facilitating the process of its afterburning at all engine operating modes, and especially in urban mode, thereby extending the filter life and reducing the cost of operating the car;
- Increases the completeness of fuel combustion, thereby reducing its consumption, all other things being equal;
- By increasing the completeness of combustion, it increases power and reduces soot formation and toxicity of exhaust gases. It can be used to prevent clogging of the particulate filter.

Application: Add to the tank before refueling in the ratio of 400 ml to 60 liters of fuel. Use every 2000 km.
Recommended for regular use.
