

Transmission Fluid Exchanger Electrical

CT4105

Products for workshops and special tools.

Automatic Transmission Fluid Oil Exchanger is designed to accomplish the replacement of transmission cooling oils as well as torque converter and transmission radiator fluids in the shortest time with an exchange rate of more than 90 %.
The machine is equipped with a LCD display to make the operation much more simple and convenient.

Product features:

- Automatic flow direction switch.
- Automatic exchange of used and new transmission oil.
- Highly accurate computerized pumping and filling of the transmission fluid.
- Oil pressure and inner machine pressure are directly shown on the LCD display.
- Comes with a variety of connectors suitable for a large number of European, American, Asian and other car models.
- Rapid operation and high exchange rate.
