

MANNOL Getriebeoel Additiv Automatic

9902

Getriebeoel-Additiv Automatik is an oil additive for classic automatic transmissions and double-clutch automatic transmissions. Recommended for extreme operating conditions and for gearboxes with a high degree of wear.

Properties:
- Modifies the surface structure of the gears, reducing the coefficient of friction and their wear;
- Neutral to seals and gaskets;
- Does not affect friction properties of friction elements;
- Reduces the noise level of the automatic transmission;
- Reduces heating of transmission elements and peak temperatures;
- Provides smooth and jerk-free gear shifting, even in heavily worn gearboxes.

Application: Add to the transmission oil – mixes independently during operation. Dosage: One can of 100 ml per 4 L of oil.
