

MANNOL Getriebeoel Additiv Manual

9903

Getriebeoel-Additiv Manual is a manual transmission oil additive to reduce friction and wear. Compatible with any type of transmission oil (both mineral and synthetic). Suitable for manual transmissions, rear axles, transfer cases and manual steering systems with an oil pan. It is recommended for use at high operating temperatures and when transmission mechanisms are subject to considerable wear.

Properties:
- Modifies the surface structure of friction surfaces, reducing the coefficient of friction and their wear;
- Neutral to oil seals and gaskets;
- Does not affect friction properties of friction elements;
- Reduces the noise level of manual transmission;
- Reduces the heating of units and peak temperatures;
- Provides smooth and jerk-free gear shifting, even in heavily worn gearboxes.

Application: Add to transmission oil – mixes independently during operation.
Dosage: One bottle of 100 ml per 4 L of oil.
