

MANNOL Marine Gear Oil
7822

Special transmission water-resistant oil based on highly refined mineral base oil for cutters, yachts, boats, jet skis and other small vessels. Developed for use in all types of units and transmission units of watercraft where the manufacturer recommends the use of API GL 5 quality level oil.

Product properties:

- A special additive package provides excellent demulsifying properties. The oil does not form a persistent emulsion with water, effectively separates water and does not lose its properties when exposed to water;
- It has good adhesion and creates a strong and durable lubricating film, which provides excellent antifriction properties and fuel economy;
- It has excellent anti-corrosion properties and protects transmission elements during winter storage;
- Thanks to its balanced composition, it provides excellent anti-wear and unrivalled anti-scuffing properties, which significantly extends the life of machinery in all, even the most extreme, modes of operation;
- Possesses increased thermo-oxidative stability, resistance to thermal degradation, resistance to ageing, exceptional viscosity stability as it does not contain thickener, which allows to extend the oil change interval and reduce maintenance costs;
- Reduces noise;
- Not aggressive to non-ferrous metals;
- Effective against aeration and foaming;
- Compatible with seal materials, prevents swelling, hardening and shrinkage, thus reducing spare parts costs.

Recommended for use in manual transmissions operating in wet environments and where there is a significant risk of water ingress. Meets the requirements of US STEEL 224 specification.

Observe the manufacturer’s instructions in the operating manual.
