

Introduction of UAB SCT LUBRICANTS

The Biggest Lube Manufacturer in Northern Europe

In the world of progressive engineering where standards and requirements are changing at lightning speed we are working hard to live up to our customers' expectations and needs in over 170 countries all over the world.

UAB SCT Lubricants is the biggest manufacturer of automotive lubricants, fluids and greases in northern Europe, located in Klaipeda, Lithuania, one of the most profitable port cities in the area.

Our factory's history dates back to 1962. Since then a large-scale reconstruction and modernization process has been initiated, the most notable result of which was the expansion of departments and the renewal of equipment.

We seek to make our production as environmentally friendly as possible. Working with engine oils, it is a necessity to understand the importance of proper waste management measures such as disposal or recycling of waste. That is why SCT Lubricants cooperates with the largest waste recycling companies in Lithuania.

Equipment and Facilities

We are proud to say that the whole process from the very beginning, when base oils are being blended with additives, until the moment when truck doors are shut after loading, takes place in our factory.

However, this has not always been the case. A large-scale reconstruction and modernization process has been initiated since the factory was obtained by SCT-Germany. The warehouses and the tank park, which allow us to maintain required conditions and temperatures for different products, were significantly expanded and renovated. Currently, the total tank capacity amounts to 40,000,000 L. Thanks to that we are always able to keep large quantities of different products in stock, so that they can be shipped immediately.

Furthermore, a high-tech laboratory was established, where each product batch is being examined three times before filling.

Today, for the first time, SCT Lubricants produces both plastic and metal canisters on its own, which means the maintenance of daily thorough quality controls and the certainty that no supplying delays will occur.

Mixing

At the moment, our factory has got four mixing tanks that meet the most stringent European quality and safety standards. With all their output we are able to produce over 700 tons of lubricants per day.

The blending machines are equipped with the latest dosing and mixing systems, including the latest pipe cleaning technology "Pig System".

The secret of our success lies in our special mixing method which has been patented by SCT Lubricants: not only is the product being rotated by the blender on the bottom of the tank, it also circulates through the pipes, which ensures the best uniform mixing.

The first quality control takes place at this stage, and each sample is being kept in our refrigerator for up to 3 years, depending on the product.

Not only do we produce oils for our own brands, but also for several private brands. This means that we offer our services to other companies, so they can have their individual oils manufactured using our producing capacities. We are very proud of the confidence placed in us.

Modern Laboratory

Our laboratory was built in 2012 and meets the requirements of the latest norms. Since then, new equipment has been purchased each year.

All samples are tested in the laboratory according to ASTM standards. Our three-stage quality testing includes a finished product test after blending, a tank-stored product test and a pre-packed product test.

Until today, we have received over 30 types of quality certificates we are extremely proud of.

Plastic Packaging Production

Much effort was put into the plastic production department, so that our factory never suffers packaging supplying delays.

There are eight machines for canisters and drums of different sizes working non-stop. We can produce over 2.5 mln. of canisters per month.

The whole process is also fully automated, and the main computer operates according to the programme, measuring, mixing, dozing and melting the material without any human involvement.

The following equipment is used for the production of plastic packaging:

Metal Packaging Production

The new metal packaging department was built in 2018 and since then its productive capacity has been over 80,000 canisters per day.

There are two fully automatic lines for canisters with the capacity of 0.5, 1, 4 and 5 litres.

Each bunch undergoes welding quality controls and seaming testing so that we can be sure no issues during transportation will occur.

The following equipment is used for metal production:

Soudronic

Fully Automatic Filling Lines

Up until now, we have built 15 filling lines for drums and both plastic and metal canisters.

All the lines are linked to the main computer and operate absolutely automatically, therefore no human mistakes can occur. Furthermore, each product batch undergoes packaging and product quality controls as well as leak testing.

With all the equipment we own, our factory can produce over 600 tons of lubricants each day.

The following equipment is used for oil filling:

Warehouse and Logistics

Our capacity allows us to continuously handle large amounts of loads:

- ▶ Warehouse capacity – over 20,000 pallets
- ▶ Daily load – over 600 tons of products

We have immediate access to products not only such as oils and lubricants, but also to additives, car care products, filters, brake pads, wiper blades and light bulbs. Thus we can offer high product availability and short delivery times.

Our location in the very heart of Europe at a Baltic Sea port which is connected to the railway network leading eastwards plays a vital role, helping us to ship our products and receive ingredients for them in time without any delays.

Customer Support

We can assure each of our customers that there is no issue we cannot solve together!

Our friendly sales team will assist you at each step of our relations, helping you to choose the products that match your region the best, organising transportation, advising you the best promotional and marketing options.

We are here to help you growing your business with us!
